### Course Outcomes:

After the course students can be able to learn

- ✚ Node.js is a platform for easily building fast, scalable network applications
- ✚ Learn how to use the event-driven, non-blocking I/O model to build data-intensive real-time applications that run across distributed devices.
- ✚ We will explore the design choices that make Node.js unique, how this change the way applications are built and how systems of applications work most effectively in this model.
- ✚ Learn how to create modular code that's robust, expressive and clear.
- ✚ Understand when to use callbacks, event emitters and streams. Use streams to easily manipulate data that would be impossible to fit in application memory.
- ✚ Gain confidence in handling errors effectively to ensure runtime reliability. The course has extensive lab exercises to reinforce the concepts and techniques covered.
