

A
Major Project Report
On
**SECURE KEYWORD SEARCH AND DATA SHARING MECHANISM
FOR CLOUD COMPUTING**

Submitted to
Jawaharlal Nehru Technological University, Hyderabad
In partial fulfillment of the requirements for the award of Degree of
Bachelor of Technology
in
Computer Science & Engineering

by

PITTALA. GOUTHAMI (196Y1A0583)
PATHIPAKA. RAKSHITHA (196Y1A0580)
RUDROJU. AKSHAYA (196Y1A0587)

Under the guidance of
MR. M. RUCHINANDAN
Asst. Professor

Department of Computer Science & Engineering

CERTIFICATE

This is to certify that the project entitled “**SECURE KEYWORD SEARCH AND DATA SHARING MECHANISM FOR CLOUD COMPUTING**” is submitted by **PITTALA. GOUTHAMI (196Y1A0583)**, **PATHIPAKA. RAKSHITHA (196Y1A0580)** and **RUDROJU. AKSHAYA (196Y1A0587)** in the partial fulfillment of requirement for the award of degree of Bachelor of Technology in Computer Science and Engineering during academic year 2022-23.

ABSTRACT

The emergence of cloud infrastructure has significantly reduced the costs of hardware and software resources in computing infrastructure. To ensure security, the data is usually encrypted before it's outsourced to the cloud. Unlike searching and sharing the plain data, it is challenging to search and share the data after encryption. Nevertheless, it is a critical task for the cloud service provider as the users expect the cloud to conduct a quick search and return the result without losing data confidentiality. To overcome these problems, we propose a ciphertext-policy attribute-based mechanism with keyword search and data sharing (CPAB-KSDS) for encrypted cloud data.

The proposed solution not only supports attribute-based keyword search but also enables attribute-based data sharing at the same time, which is in contrast to the existing solutions that only support either one of two features. Additionally, the keyword in our scheme can be updated during the sharing phase without interacting with the PKG. In this project, we describe the notion of CPAB-KSDS as well as its security model. Besides, we propose a concrete scheme and prove that it is against chosen ciphertext attack and chosen keyword attack secure in the random oracle model. Finally, the proposed construction is demonstrated practical and efficient in the performance and property comparison.
