ABSTRACT

This major project focuses on feature analysis of college students' campus network behavior using Machine learning Techniques. With the increasing reliance on digital platforms for academic, social, and recreational activities, understanding the behavior of college students on the campus network has become crucial.

The project aims to explore the vast amount of data generated by students' network activities to extract meaningful insights and identify key patterns.

As a result of this research, we were able to collect data of students in college network activity, which may be used to aid in the development of academic advising management.
